CABINET
COMPONENTS

Shopkit have developed a system of components that enables designers to create cabinets or counters to their own specification.

Cabinets and counters have adjustable shelving and if required, integral low voltage lighting powered from the same cables and rods that support the shelves.

Most components are available in a variety of finishes, including silver and black chrome, brass and stainless steel.

Shopkit will design, manufacture, supply and install cabinets with or without glass, world-wide.

Cabinet Components 16

Steel and Glass Cabinets

A unique glass display case which uses the glass itself to support tensioned lighting cables, which in turn are used to support fully adjustable glass shelves. As there is no frame to the unit, the height can be determined by the glass size. Shopkit can supply all the components – top frame, base frame, base plinth, power cables (complete with tensioners), lights as required and transformer – with or without the glass.

Top and base frames are supplied as standard sizes – 500mm, 600mm and 750mm square, in high grade stainless steel.

Standard shelves are 400mm, 500mm and 650mm or to client's specifications, and are available in glass, timber.

Shopkit will also manufacture cabinets to clients' own size requirement.

SS/G.001 - Stainless steel / glass, 2200 x 650 x 650 mm

Wood and Glass Cabinets

This style of cabinet uses wooden structures to anchor the glass panels. Once again the glass itself supports the Rod system, which in turn is used to support fully adjustable glass shelves. As there is no frame to the unit, the height, width and depth are determined by the glass and box sizes.

Cabinets and counters can have integral low voltage lighting powered off the same Rods that support the shelves. **Shopkit will design, manufacture and supply cabinets complete with glass or components only for self assembly.**

Most components are available in a variety of finishes including silver and black chrome, brass and stainless steel.

W/G.001 - Wood / glass,
2100 x 650 x 650 mm

W/G.002 - Wood / glass,
2100 x 650 x 650 mm

W/G.003 - Wood / glass,
1000 x 1000 x 650 mm

New Range of Glass Cabinets 1800 x 500 x 500mm

These three new cabinets, have a standard size of 1800 x 500 x 500mm. They are supplied with adjustable shelves secured to the cables/rods using standard components and if required, integral low voltage lighting.

Installation can be arranged using qualified technicians. For some sitings a surveyor's report may be required.

Close up of the low-voltage downlighters from cabinet W/G.005

W/G.004 - Wood / glass, 1800 x 650 x 650 mm, complete with low-voltage cable and rod lighting

W/G.005 - Wood / glass, 1800 x 650 x 650 mm, complete with low-voltage downlighters

Choose from a range of veneered timber bases

SS/G.002 - Glass cabinet, using multi plain stainless steel or aluminium fixings, 1800 x 650 x 650 mm

Cable Mounted Cabinets

Shopkit have developed a system of components which facilitates the creation of cable mounted cabinets to any specification.

These suspended cabinets have adjustable shelves secured to the cables using standard cable components and if required integral low voltage lighting powered from the same support cables. **The cabinets may either be purchased complete with glass from Shopkit, or supplied as components (without glass) for self assembly.**

The cabinets may be cable fixed directly to the wall, ceiling and floor, or fixed to framework – as shown here. Call 01923 818282 for further details.

when hinged door required

Single and Twin Rig Cabinet

The Single or Twin Rig cabinet is supported by the Shopkit Mast System – offering flexibility of siting whether free standing for access and viewing to both sides or secured to the wall.

Cabinets have adjustable shelves, secured to the cables using standard cable components and if required, integral low voltage lighting powered from the same support cables. **The cabinets can either be purchased complete with glass from Shopkit or supplied as components (without glass) for self assembly.**

All components are available in a variety of finishes, including anodised aluminium or chromed – silver and black, brass and stainless steel.

Custom Made Cabinets

Shopkit can design and manufacture complete cabinets or individual components to clients' specifications. Cabinets may be made to any dimensions and constructed from glass combined with metal or wood.

The cabinet's shelf support system may be of cable or rod and if required integral low voltage lighting can be powered from the same support system.

Installation can be arranged using qualified technicians. For some sitings a surveyor's report may be required.

Free standing cabinet, with pull out display area.

Low Voltage Lighting

Integral low voltage lighting components can be purchased separately and added to cabinets at a later date if required. Power for the lighting is supplied to the shelf support medium, either Rod or Cable, via simple connection to transformers sited on walls, ceiling, top box (as used in the wood and glass cabinet), base units (as in the steel and glass cabinet, counters and wood and glass units).

A wide range of Shopkit's own low voltage lighting is detailed in the TZ Low Voltage Lighting brochure, which is available on request by calling the technical support line on 01923 818282.
